Wireless 5G Supply Chain Program

CAGE CODE: 4WAJ9 | DUNS # 806696485

Benefits of an End-to-end Service Program

- Premier manages end-to-end material and resources to reduce cycle time
- Material sorted by project, configured and managed as a kit thereby eliminating missing items and DOAs
- Streamlining transportation to eliminate multiple handoffs and multiple shipments – no holding zones

Installation Ready Kits

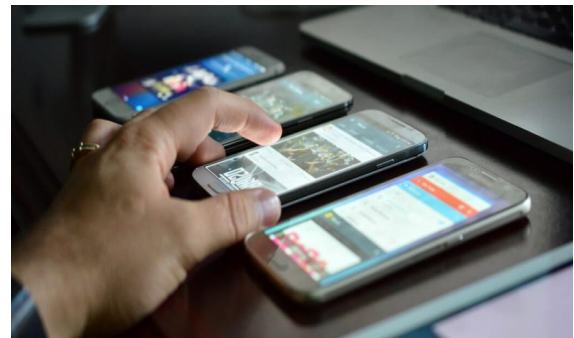

As part of this wireless solution, Premier provides customers with kitting services of multiple, disparate telecom, data and software products. Based on BOMs and pick lists, exact material from multi-vendor sources is packaged into efficient shipping containers and managed to ensure on-time delivery.

Installation Ready Configured Assembly

- Premier will build a cabinet or rack to specification in our factory and ship to site ready to install. Configuration can include antennas, servers, routers, power supply, switches and all the associated cabling to specification.
- The configuration can stop at assembly or continue to green light testing, power up, network testing, and integration testing of multiple builds on interoperable on-site lab.
- Premier can track and/or upgrade software loads on each unit, provide asset and cable tagging, and preconfigure settings.

Logistics

- A full-service warehouse and supply chain service
- Experienced buyers use buying power or act as a client proxy to acquire products worldwide for receipt, inventory and warehousing.
- The inventory can be shipped – with “white glove service” using the most economical route – for on-time, no hassle delivery, just-in-time for a field or onsite installation.

Wireless 5G Supply Chain Program

General Support

- Staffing
- Warehousing
- Product Procurement

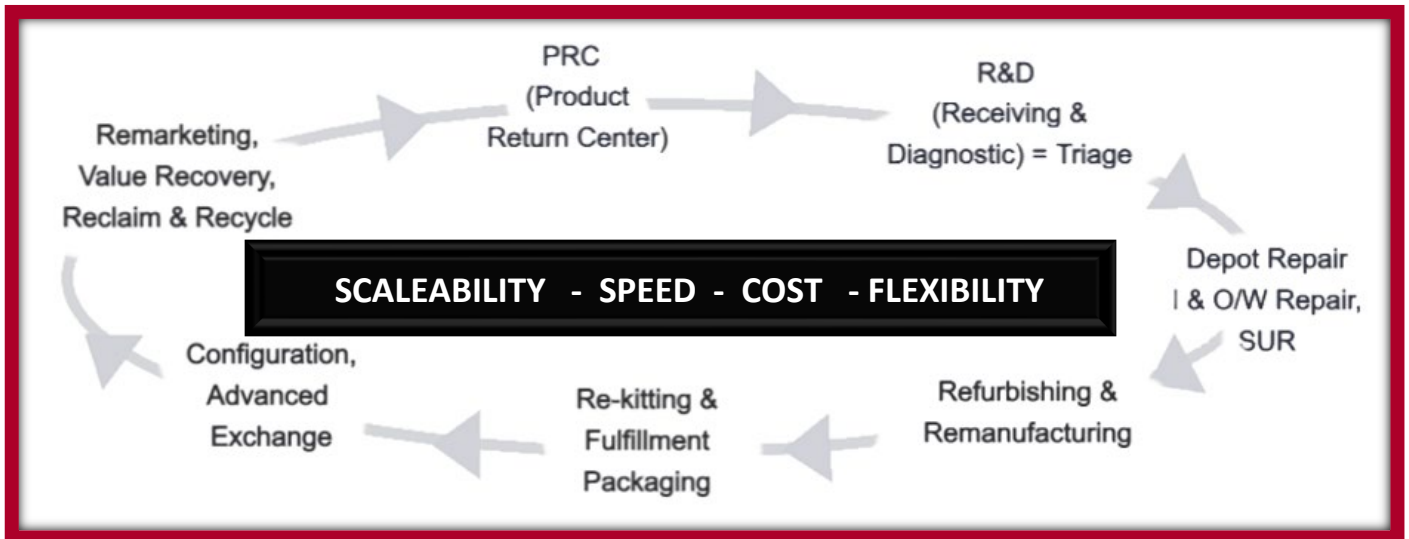

Field Installation

- Delivery to Site
- On-site Installation
- Systems Test and Turn-up
- Quality Review and Audit Point
- Network Migration

Post Installation Support & Reverse Logistics

- Data and Record Maintenance
- Leftover or Installation Issues
- Triage Center for Warranty Issues
- Warranty Replacement
- Break Fix Depot Repair of OEM Equipment(5G testing in process)
- End of Life Support and Recycle

Full Reverse Logistics Support

Program Management

In order to ensure that this project is fully operational by required due date, the Program Manager will ensure that:

- All operational goals and metrics are aligned with requirements
- Regular internal meetings provide status updates from each functional area and ensure that the project is on-track
- All work instructions, check lists and other internal workflow documents are in place
- All KPIs are clearly communicated and that the processes for tracking these metrics are defined and implemented
- All employees working on the new business line are properly trained prior to performing any work
